

## Advancing Equity, Health, and Resiliency with Stormwater Parks

*Manchester Stormwater Park, Kitsap County*

[Stormwater parks](#) can help with many challenges that cities and counties face, such as equity, health, and resiliency. Stormwater parks are facilities that provide both stormwater treatment and recreation. They address climate resilience and community health through increasing access to green space and recreation. They can help advance racial equity when built in communities underserved by parks and by supporting Tribal treaty rights. Stormwater parks vary greatly in form, function, and size, so they can work well on a variety of sites. The objective of the session is to show different types of stormwater parks and share knowledge on planning them. The session will share funding sources for the planning, construction, and maintenance of stormwater parks and provide an overview of the Planning for Stormwater Parks guidance document.

**Please join us at our next Peer Networking event on November 4 to hear from local jurisdictions in the central Puget Sound region on their experience in planning stormwater parks. In the afternoon, there will be an opportunity visit a stormwater park at Point Defiance in Tacoma.**
